

## POT EMPLOYEE INTERFACE

BIG IDEA: Filter jobs/  
Applicants on page in a  
comfortable, but not in  
your face way

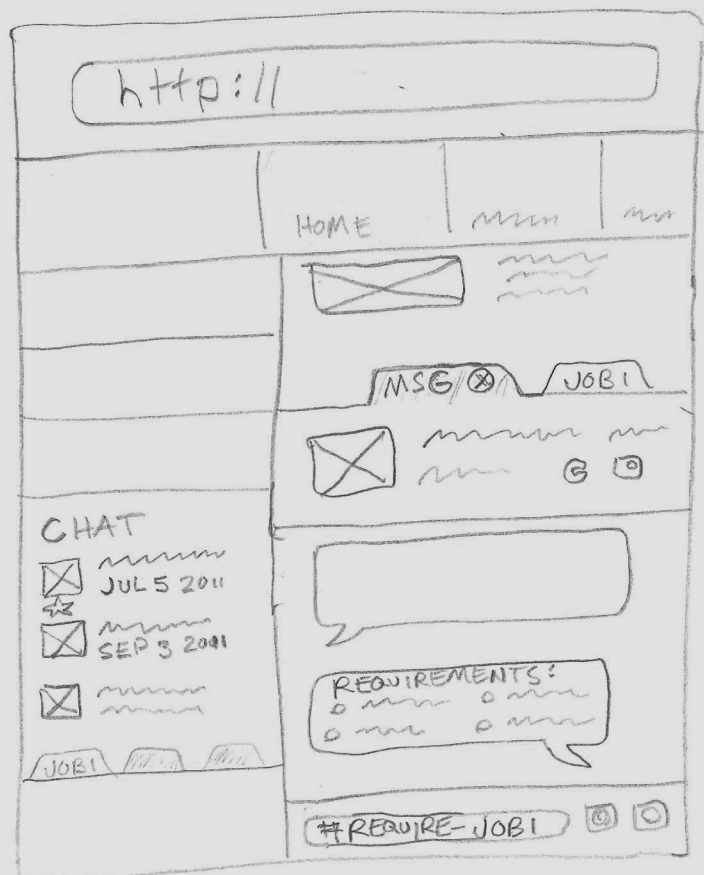

- 1) less important in the lower  
left most menu to leave  
upper part for more important  
features
- 2) Highlight feature in job  
area if mouse hovers over in  
left menu
- 3) option to choose between  
your location or a custom one

## EMPLOYER INTERFACE

BIG IDEA: Present  
POTENTIAL  
employer custom filter  
and good interface to get  
best applicant tailor  
made.

- 1) Experience given subfield  
for job subtypes ie programming  
and java
- 2) Job desc. above applicants
- 3) Tabs for other jobs the  
employer put out
- 4) Slider bars for intuitiveness

## EMPLOYER VIEW

BIG IDEA: Specially designed message system utilizing info on user

- 1) Kept near bottomish
- 2) Dates of comm
- 3) Employers:  
chat separates applicants by job list and can star users

Employees:  
chat separated by user manually through what job they want most

- 4) Custom chat keywords that pull up specific portions of their profile ie #Resume-jobs would list their job history in their resume

- 5) Can call and video chat with each other and employers can click user profile for more info on them
- 6) Employers get a view above on the job that they're messaging the user about.
